Sorting

Sorting is used to arrange data in a specific order based on values, cell colors, or cell icons.

a. **Sorting department based on color**

Arranging department based on the cell color

Steps:

- Select the data table
- Go to the home tab → click sort and filter
- Select custom sort
- In the sort by option, select department
- In sort on option, select cell color
- In the order option, select the required color
- choose on top or on bottom
- click OK

To delete choose delete level
To add choose Add level
To copy choose copy level

Filtering

Filtering is used to display only the data that meets a specific condition while hiding the

remaining rows temporarily

a. Filtering based on Department.

Steps :

- Select the data table, including the headings.
- Go to home tab -> choose sort and filter.
- Choose filter,
- In the text filters, choose the required option and unclick the remaining option.
- Click ok

Multiple filtering based on region and department

- Go to Data tab, choose advanced sort and filter
- In the List range, choose the whole table
- In the criterid range, choose the other range for ex: we ~~count~~ have the regin and department criterid in J2:K5 range choose that
- Click ok.

Solver

Solver is an excel tool used to find the best possible solution to a problem by changing specific input values, subject to given condition or constraints.

DATE: PAGE:

It is used for optimization, such as maximizing profit, minimizing cost or achiving a target value.

Steps :

* Go to data tab, and choose solver
- In set objective choose the grand total cell
- In to parameters, choose any one
  (max) : finds the highest possible value for the objective cell.
  (min) : finds the lowest possible value for the objective cell
  (value of) : finds a solution where the objective cell reaches a specific value
- In by changing variable cells, choose the cells solver can chang to find the best solution
- In subject to the constraints, choose Add
- The conditions or limits that the solution must follow.
- choose solve to run the solver.
